Member of the CAMBRA coalition, American Academy of Cariology, American Academy of Pediatrics- Section on Oral Health and The Alliance for Oral Health Beyond Borders. Longstanding member of ADHA. Listed in Dentistry Today as a top speaker for over a decade. Volunteer clinician home and abroad before the pandemic!

Don't Get Caught with Your Pants Down

(3 CEU's)

How many times a day do patients come in to your operatory telling you about some new product they bought on Amazon or at some health food store? It's hard to keep up with all of them. Do you remember when the dental care aisle in your local pharmacy was actually just a small section of an aisle and only contained a handful of toothbrushes, toothpastes, and maybe some mouthwash? Clearly, times have changed. Now, the dental care is truly an entire aisle (or two) and is filled with a variety of products including toothbrushes, toothpastes, mouthwashes and rinses, and so much more. It's overwhelming for any dental professional...let alone your patients. In this 3 hour course, we will look at mouthwash and toothpaste options including the historical progression of many of them along with many of the DIY modalities and together we will figure out what is best for our individual patient's needs.

Let's not get caught with our pants down...

Course objectives include:

- Looking at trends in dental marketing and how they shape our decision-making process
- Formulating a homecare protocol for toothpaste and mouthwash options
- Evaluating and discussing the science behind many OTC products and DIY products including charcoal, oil pulling, turmeric, CBD etc...

Paving the Way to a Caries Free Practice

How technology is changing delivery of care for Caries patients

(3 CEU's)

Throughout history, mankind has constantly been in search of a better way. A better way to travel. A better way to communicate. A better way to educate. Finding a better way requires a plan that involves mapping out ones destination, setting a course, carving out a path, and ultimately paving the way. This program focuses on the innovations and advancements in remineralization products and technologies that will influence and change the delivery of care we provide to our patients tomorrow.

We introduce a suggested "Caries Risk Assessment" survey to help identify individual patient risk level, and then mapping out a treatment plan that takes into consideration all factors that can influence the caries pattern and prevalence. We will look at the latest technologies, to diagnosis and reverse early caries patterns. So let's pave the way to a caries free practice.

Course objectives:

- Identify the need for implementing a Caries Risk Assessment for all patients in a practice.
- Differentiate the stages of an active carious lesion and identify when remineralization therapy or surgical restorative treatment is indicated
- Discuss current dietary challenges and medical challenges that place a patient at greater risk for caries
- Compare the latest products engineered to deliver "calcium and phosphate" and how they interact to improve fluoride uptake
- Review the importance of dental sealants in preventing caries
- Define the mechanism of action and benefits of Silver Diamine Fluoride
- Review protocols and techniques for SDF placement

Registration Information

Registration is Open!

Early Bird Special Ends September 16th

Save Time

Register Online at www.iowadha.com

Online registration will close on September 25th, 2022. After September 25th, you will be able to register on-site (if space is available.) No Handouts will be available onsite. Handouts will be e-mailed out to participants 1 week in advance.

Online processing fees will be applied and fees are non-refundable.
